

What are the testing requirements for battery cabinets?

VDMA 24994 defines the testing requirements for battery cabinets. Only cabinets that pass rigorous practical tests with lithium-ion batteries receive an ECB-S certificate. Testing can only be carried out by accredited laboratories. In Europe, there are just two: MPA Dresden (Germany) and GryfitLab (Poland), both recognised by ECB-S..

What are the test requirements for a battery charger?

The combined use of batteries, chargers and charging stations in various different operational states often leads to several test requirements for these, including: testing for safety, performance, component interoperability, energy efficiency, electromagnetic compatibility (EMC), hazardous substances, chemicals and explosion safety.

Should lithium-ion batteries be stored in a certified battery safe?

In many cases, they now require that lithium-ion batteries be stored and charged in a certified battery safe. The VDMA 24994 testing requirements are not a standalone solution. It's currently being used as the basis for a new European standard for lithium-ion battery storage. That standard is under development, but formal adoption may take years.
