

Bogotá's lithium battery project isn't just about storing energy--it's about building a resilient, sustainable city. From stabilizing the grid to empowering EVs, this initiative sets a blueprint for urban energy ...

Can Colombia's power distribution networks accommodate growing demand from electric vehicles? The World Bank has been providing technical advice and expertise to help Colombia and its National ...

Offers one-stop-shop for hardware, installation, and support. Colombia is rapidly emerging as a key player in Latin America's electric vehicle (EV) ecosystem, driven by ambitious national policies, ...

As Bogota aims to become Latin America's first carbon-neutral capital, energy storage isn't just an option--it's the foundation. From stabilizing the grid to enabling renewable growth, these systems are ...

The Colombian energy grid also has a vital role to play in their transition to cleaner transportation. The grid produces a high percentage of hydroelectric power and has sufficient ...

Ten municipalities will offer spaces for the development of renewable energies, prioritizing solar energy, starting with the project in the municipality of Guatavita.

Electric vehicles can lower most direct emissions, except wear and resuspension. Battery electric vehicle emission reductions depend strongly on the energy mix. Colombian electric mix (70 ...

The expansion of charging stations at strategic points in the city has eased the transition for users, ensuring that recharging an electric vehicle is as easy as filling up the gas tank.

As Enel Group companies in Colombia with the purpose of turning our capital city into a smart city and a Latin American benchmark, we have created, developed and implemented initiatives that foster a ...

In this paper, we review recent energy recovery and storage technologies which have a potential for use in EVs, including the on-board waste energy harvesting and energy storage technologies, and multi ...
