

By recognising storage systems under EU funding mechanisms and grid planning processes, the EU can unlock their full potential, not only in stabilising energy supply and maximising renewable energy ...

European Union countries deployed record-breaking battery storage capacity for the 12th consecutive year in 2025.

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example ...

New analysis reveals another year of record installations for European battery storage, despite slower year-on-year growth, according to the latest European Market Outlook for Battery ...

The EU Battery Storage Market Review 2025 identifies three priority areas for EU action to effectively scale battery storage. Accelerate deployment of BESS: To speed up the rollout of ...

This annual report analyzes developments in the European battery storage market and provides in-depth insights into key applications such as large-scale storage systems, industrial and ...

Discover all statistics and data on Energy storage in Europe now on statista !

The European battery storage market grew by 15% in 2024, reaching 61.1 GWh of installed capacity. SolarPower Europe warns that, despite projecting to reach 400 GWh by 2029, the ...

27.1 GWh of new battery capacity installed in 2025, marking the EU's 12th consecutive record year for battery storage deployment. 55% of all new capacity came from utility-scale systems, ...

In 2025, European Union member states installed 27.1 GWh of new battery energy storage capacity--a 45% increase over 2024--marking the twelfth consecutive year of record ...
