

Could a three-wheeled electric car be embedded with solar panels?

A new market for three-wheeled electric vehicles is beginning to take shape, and that's good news for the US electric vehicle startup Aptera. The company has been inching its way towards the launch of a futuristic three-wheeled car embedded with solar panels, dinged by many skeptics along the way.

Will Aptera make a solar electric car with 3 wheels?

aptera unveils the production-ready version of its solar electric car with three wheels during CES 2025 in las vegas.

Can solar panels power a car?

Under the right conditions, the solar panels can power the car for up to 40 miles daily, which is more than enough to cover the driving needs of the average US driver. The idea of embedding solar panels on electric vehicles is not unique to Aptera. Depending on the owner's situation, a car can spend hours parked or moving in sunlight.

Who makes a solar electric vehicle?

The European firm Lightyear comes to mind. The company started off with a plan for making its own electric vehicles, eventually dropping the idea in favor of selling its "Lightyear Layer" solar technology to other automakers. Aptera's story is of a piece with other solar electric vehicle experiences.
