

Breakthrough solar technologies are revolutionizing Europe's energy landscape in 2024, bringing unprecedented efficiency and accessibility to renewable power generation.

The company's flagship facility in Delfzijl, in the Groningen Sea Ports area is poised to become Europe's first fully renewable-powered plant producing high-quality polysilicon at scale, securing critical value ...

1KOMMA5&#176; announces the launch of its new 1KOMMA5&#176; Full Black double-glass solar module. The company is the only German manufacturer to use polysilicon from Bavaria and Saxony for its solar ...

SolarPower Europe writes to representatives from the Council of the EU and the European Commission to ask for their support in including polysilicon on the EU critical raw materials list.

The electricity generated by the whole Ashalim solar complex is enough to supply 120,000 homes with clean energy. The complex will avoid 110,000 tons of CO2 emissions each year over the course of its life.

The announced support schemes for solar PV manufacturing in Europe, attempting to boost EU's domestic manufacturing capacities and rebuilt its competitiveness in the global PV value chain, are encouraging, but ...

Regional energy policies act as decisive catalysts for power generation glass demand by creating distinct market dynamics across geographies. In the European Union, strict carbon neutrality mandates under the ...

While the EU PV value chain is in a good position regarding polysilicon manufacturing, backsheets, contact materials, inverters and balance of system components, an accelerated development of ...

The landscape for high-purity polysilicon for solar has never been more innovative or efficient--and the results are bearing out in a more affordable green energy future.
