

Two major areas of international trade that will remain causes of concern for energy storage projects are the application of tariffs and supply chain integrity.

Imports of lithium-ion batteries and battery parts from China to the United States grew at accelerated rates into the 2020s. Manufacturers in China captured market share partly because of historically ...

Let's cut to the chase: if you're in the energy storage equipment foreign trade game, you're either a manufacturer eyeing overseas markets, a policy wonk tracking green tech trends, or a coffee ...

Recent trade actions have increased the cost of critical, imported materials and components, including those linked to lithium battery production. These increases are not limited to direct imports - they ...

As battery manufacturing spreads and prices soften, developers are diversifying supply and implementing new deployment strategies to meet the growing need for dispatchable power.

Engaging in foreign trade focused on energy storage batteries presents both opportunities and hurdles. As the global energy landscape evolves, the surge in demand for sustainable solutions ...

Increased supply of lithium is paramount for the energy transition, as the future of transportation and energy storage relies on lithium-ion batteries. Lithium demand has tripled since ...

Building US domestic energy storage manufacturing capacity will require more than limiting foreign participation, writes Aaron Marks of Intertek CEA. 2025 has so far represented a ...

US imports of various types of batteries and related parts for energy storage systems, electric vehicles, consumer electronics and other uses have soared this decade, especially lithium ...

Despite over 90% of U.S. reliance on Chinese cells, tariffs on Chinese energy storage products are increasing, driving companies to expand overseas capacity and build more resilient ...
