

The project is a crucial puzzle piece in the German energy transition; it is supposed to provide the necessary infrastructure to transmit renewable wind energy from northern Germany to the southern ...

The German government has also implemented various policies to support the development of microgrids, including feed-in tariffs and subsidies for renewable energy projects. Additionally, the ...

In Germany, the government has implemented a range of policies to support the development and growth of the microgrid market. Key initiatives include the EEG (Renewable Energy Sources Act) ...

As a result, this paper presents a diversified approach to the regulation of microgrids, focusing on the regulatory puzzle of integrating the microgrid models in the EU legal framework, as ...

Government incentives and subsidies, coupled with favorable taxation patterns and policy enablers, are catalyzing investments in microgrid infrastructure and innovative energy projects.

The German economy ministry is planning to scale back grid access priority for renewables in an upcoming reform of the country's renewable energy support framework, according ...

Germany's ambitious energy transition policy emphasizes renewable energy, targeting a 100% carbon-neutral grid by 2050. Microgrids enable efficient integration of distributed renewable energy ...

GEIG is the transposition of the European Directive on the energy performance in building (2018/844) into German law. The law aims to accelerate the charging infrastructure in residential and non ...

We need more efficient and more intelligent grids in Germany and Europe to make sure that fluctuating electricity generation from wind power and solar energy does not jeopardise grid stability.

The microgrid as-a-service market in Germany benefits from a supportive policy framework that encourages the adoption of decentralized energy systems. Government initiatives aimed at ...
