

China has made a revolutionary breakthrough in renewable energy engineering after it just launched the world's first solar-thermal power plant that utilizes a dual-tower system to generate...

"I find it interesting to examine how Qinghai maintains the balance between this energy development and environmental protection." The Spanish correspondent found the answer at this ...

Sheep graze beneath solar panels at a photovoltaic park in the Talatan Gobi Desert in Gonghe county, Hainan Tibetan Autonomous Prefecture, northwest China's Qinghai Province.

The Xina Solar One Power Station is a 100 MW (130,000 hp) concentrated solar power plant in South Africa. Constructed between 2014 and 2016, the power station was commercially ...

Abstract: Solar photovoltaic power generation, as an environmentally friendly energy technology that converts sunlight into electricity, directly converts sunlight into electricity through the use ...

Primarily focusing on large-scale wind and solar power development with a total installed capacity of 13 million kW, the project, the country's first in response to the government's ambitions to ...

Rooftop photovoltaic (PV) power generation is an important form of solar energy development, especially in rural areas where there is a large quantity of idle rural building ...

A solar park in the Gobi Desert in northwest China's Qinghai Province generates ample clean energy for nearby areas and beyond, in line with the country's strategy of pursuing low-carbon ...

China has switched on a world-first solar thermal power station in the Gobi Desert that is said to be a cheaper and more efficient use of the technology with potential to be scaled up.

China continues its relentless expansion of solar power capacity, now home to the world's largest solar plant. The 2.2 gigawatt facility spans an area of over 25 square kilometers in the Gobi desert.
