

India's rapid solar capacity expansion is running ahead of its power system's ability to absorb clean energy, leading to the curtailment of 2.3 terawatt-hours (TWh) of solar generation in ...

India, along its desolate border with Pakistan, is building what it boasts will be the world's largest renewable power plant, an emblem of a determined push to boost solar energy.

India has added an unprecedented level of solar capacity over the last two years. The country saw a rise of about 25 gigawatts in 2024 and a similar volume by October 2025.

Explore the top 10 solar power plants in India (2026), installed capacity, upcoming projects, and the growing role of battery energy storage systems.

Solar is now half the cost of power from new coal-powered plants. Availability of cheap components and many sunny days each year in India are some reasons experts say installed solar power increased ...

As the world's third-largest producer of renewable energy, India has made remarkable strides in the solar sector, crossing the milestone of 100 GW of installed capacity. This success is ...

India's power grid is struggling to absorb a surge in solar power installations, leading to more curtailment that threatens the build-out of renewables and underscores the need for energy...

With plenty of sunlight and strong government support India is quickly moving up as one of the top countries using solar power. Experts believe that by 2025, it will be one of the world's ...

The government is running a scheme called "Development of Solar Parks and Ultra Mega Solar Power Projects" to set up large solar power plants connected to the electricity grid, with a ...

India's solar power revolution is not just cutting costs--it's reshaping the roadmap to a fossil-free, developed economy. One of the extraordinary achievements of recent years has been the ...
