

The world could face a shortage for lithium as demand for the metal ramps up, with some analysts forecasting that it could come as soon as 2025.

The International Energy Agency warns of potential lithium shortages as demand increases, while mining challenges and the long timeline for new production contribute to supply ...

Rapidly rising demand for lithium - the critical ingredient in EV batteries - could outstrip domestic supply in major markets by the end of the decade. The analysis focused on China, the US ...

Given China's leading position in the refining and consumption of lithium, there is some expectation within the market that the lithium industry will not be unscathed by rising geopolitical tensions.

Electric vehicles can be quick off the mark thanks to the instant power released by their lithium batteries, but it could be a case of too far, too fast, for lithium miners which have...

The lithium market is exposed to risks, including volatile energy prices and geopolitical tensions. The reliance on lengthy mine development timelines poses a critical challenge, potentially ...

LAS VEGAS, June 26 (Reuters) - An ongoing slide in lithium prices even as demand for the battery metal continues to climb is a frustrating "paradox"; not likely to be resolved before at least...

China, Europe, and the USA have ambitious EV plans, yet EVs depend heavily on lithium, raising concerns about supply allocation among regions amid potential global shortages.

The global market for lithium-ion batteries is expected to remain oversupplied through 2028, pushing prices downward, as lower electric vehicle production targets in the U.S. and Europe...

The lithium industry is experiencing excitement over demand for large-scale battery storage, overshadowing supply-side anxiety in China.
