

Mexico's new regulation mandating battery systems for solar and wind projects positions it as a model for energy storage integration in Latin America, according to a new report.

Future wind and solar energy projects in Mexico will be required to colocate battery energy storage systems equivalent to 30% of their capacity, a senior government official told the ...

The new rule requires solar and wind power plants to include battery systems with a capacity equivalent to 30% of their installed power, aiming to add 574 MW of storage by 2028.

Renewable energy developers in Mexico will need to provide battery storage equivalent to 30% of a plant's capacity, senior energy ministry official Jorge Islas said.

Battery Energy Storage Systems (BESS) have gained momentum in Mexico, with both the federal government and private companies ramping up plans to install several gigawatts of capacity over the ...

According to Mexico's Deputy Minister of Energy Planning and Transition, all new intermittent renewable energy plants will be required to include batteries equivalent to 30% of ...

This reflects a significant commitment to strengthening Mexico's energy infrastructure, aimed at improving the stability and efficiency of the national electricity system, where battery ...

This report provides a high-level summary of the role that battery storage technologies can play in Mexico's transition toward higher penetrations of variable renewable energy generation.

Mexico's new 30% battery storage mandate is set to transform the renewable energy sector. Learn how this policy impacts grid stability, private investment, and the future of energy ...
