

How is energy used in Namibia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How much did Namibia export in 2024?

Located on Africa's southwestern coast, the Republic of Namibia shipped US\$6.53 billionworth of exported products around the globe in 2024. That dollar amount results from a 20.3% increase from 5 years earlier in 2020 when Namibian exports totaled \$5.42 billion.

Can Namibia become a net exporter of energy?

Over the long-term, the government and NamPower have committed to making Namibia energy self-sufficient (and eventually a net exporter of power) by building new domestic generation capacity. NamPower has made some progress in efforts to increase its generation capacity.

Why does Namibia require a power supply?

Namibia requires a power supply because 61% of its energy is currently imported, and local generation only produces 39% of its electricity.

Energy imports and exports Imports, particularly of fossil fuels like oil, natural gas and coal, make up an important part of the energy supply in many countries. Countries that rely heavily on imported ...
