

## National standard for the thickness of the galvanized layer of photovoltaic bracket

According to the national standard GBT13192-2002 for raw materials, the thickness of the attached zinc layer is determined. Generally, the thickness of the attached hot-dip galvanized ...

This characteristic makes aluminum a suitable choice for PV installations in coastal areas or locations with high humidity. At present, the main anti-corrosion method of the bracket is hot-dip galvanized ...

According to the requirements of national standards, the average thickness of the galvanized layer should be greater than 50mm, and the minimum thickness should be greater than ...

What is an example of an assembled steel bracket? The following is an example of an assembled steel bracket. First, high-quality section steel usually has a high-level galvanizing process. According to ...

Photovoltaic module bracket usually consists of C-steel. The manufacturer should carry out on its outer layer of hot dip galvanized rust treatment to meet the relevant national standards, that is, ...

The following takes a bracket with a thickness of 2.0mm as an example to illustrate the thickness of the galvanized layer to meet the service life requirements of environmental corrosion.

The following is an example of an assembled steel bracket. First, high-quality section steel usually has a high-level galvanizing process. According to the requirements of national standards, the average ...
