

The neutral Zn/Fe RFB shows excellent efficiencies and superior cycling stability over 2000 cycles.

Herein, an ethylenediamine tetramethylenephosphonic (EDTMP) acid-coordinated Fe ion [Fe (EDTMP)], that reaches 1.5 M solubility under mild conditions (pH \approx 8), is designed as anolyte to overcome the ...

We demonstrate an aqueous organic and organometallic redox flow battery utilizing reactants composed of only earth-abundant elements and operating at neutral pH.

Abstract Neutral zinc-iron flow batteries (ZIFBs) remain attractive due to features of low cost, abundant reserves, and mild operating medium. However, the ZIFBs based on Fe (CN)₆³⁻/Fe ...

Among them, neutral zinc-iron flow batteries (NZIFBs) offer additional advantages such as environmental friendliness and non-corrosive operation, which draw significant attention.

Paired with concentrated K₂S anolyte, we demonstrate a neutral aqueous SMRT-based PB-Fe/S flow battery with ultra-long lifespan over 7000 cycles (4500 h) and ultra-low chemical cost ...

In this study, the authors introduced a pH recovery system to address crossover issues, ensuring long-lasting, high-voltage pH-decoupled flow batteries.

This work not only forms a promising energy storage device with dendrite-free and low-cost benefits, but also provide a deep insight into its overall behavior, which is highly beneficial to the ...

By combining high voltage with low resistance from a highly selective and conductive membrane, Robb et al. demonstrate an aqueous flow battery that achieves record non-acidic power ...

Flow batteries (FBs) are one of the most promising stationary energy-storage devices for storing renewable energy. However, commercial progress of FBs is limited by their high cost and low ...
