

AGL will partner with Cadell Orchards to build a renewable energy microgrid to power irrigation at its almond orchard farm. A five-hectare solar farm battery will power this microgrid.

By enabling a reliable and responsive microgrid, the solution not only powers the orchard's irrigation system but also allows other energy components to be downsized -- reducing CAPEX ...

AGL Energy has completed the installation of a solar-powered microgrid featuring a 5.4 MWh battery energy storage system that is to support the transition of a New South Wales ...

Share this article Catalyst Power's Connected Microgrid Solution Will Help Orchard Save Money, Fight Climate Change, and Avoid Power Outages With No Upfront Costs

AGL Energy will partner with a fruit and tree nut farmer in the New South Wales Riverina region to build an agricultural microgrid, shifting the irrigation system from diesel power generators to a mix of solar ...

The microgrid constructed by AGL combines solar, battery and diesel to provide the almond orchard with a reliable source of power.

The initiative is supported by Australian utility AGL, which is delivering a solar-powered microgrid to help the commercial orchard transition from diesel to renewables.

Discover how AGL installed a microgrid with solar and battery to help Cadell transition to renewable energy.

Controlled as a microgrid by over twenty PowerTec PaDECS® edge controllers, the network can, among various other functions, autonomously reconfigure to adapt to operational ...

Discover how a Connected Microgrid solution can benefit orchards and vineyards, providing cost savings, environmental benefits, and energy independence.
