

By the end of 2024, Croatia had reached 3.8 GW of installed renewable energy capacity, with solar energy doubling its figures in one year. By 2025, photovoltaic power is expected to exceed ...

The iconic venue, home to the national football team and the Norwegian Cup Final, recently installed a massive vertical solar PV system, marking a transformative shift in energy production.

Croatia is a fast-growing solar market with excellent solar resources, especially along its coastal belt and islands. From hotels and marinas to homes and farms, solar systems reduce energy costs and ...

In Croatia, home energy storage systems are becoming essential as the country transitions to net billing in 2026. These systems are more than just an investment in the present -- they are a way to ensure ...

According to the guidelines, Croatia has all the natural prerequisites to be one of the most significant producers of solar energy in the EU, however, this chance has been missed because of an ...

Renewable sources supply around 30% of Croatia's energy needs, but only two percent is solar energy. The potential for solar energy is estimated at 6.8GW (majority in utility-scale or ground system PV ...

The most used source is solar radiation which is converted into thermal or electrical energy through passive and active systems integrated into the architectural envelope.

Croatia crossed the 1 GW milestone in May 2025 and, if current trends persist, could reach 1,290 MW by December 2025. The self-supply sector, particularly households and public ...

Croatia is expected to surpass 1 GW of solar power by 2025, driven by a significant increase in installations and supportive policies. The expansion is part of the country's broader ...

Croatia's solar market continues to grow steadily, led by the self-supply and commercial and industrial (C& I) segments, while regulatory barriers stall utility-scale development.
