

This solution enables cloud-based, real-time aggregative control, management and reporting of a pool of distributed energy resources, such as PV, storage, and electric vehicles, for the creation of virtual ...

Our cloud platform seamlessly integrates with various assets, including solar photovoltaic arrays, wind turbines, energy storage systems, and building management systems.

The Renewables Data Lake & Analytics is a cloud native solution that offers customers IoT data ingestion pipeline, data lake and advanced analytics for their renewable energy assets.

Discover the top 5 smart monitoring platforms for solar and energy management with real-time insights, analytics, and integration tools.

The proposed Intelligent Monitoring System (IMS) for Photovoltaic (PV) systems is a cost-effective and easy-to-implement solution for monitoring large-scale PV power plants. It utilizes IoT for...

Short-term storage that lasts just a few minutes will ensure a solar plant operates smoothly during output fluctuations due to passing clouds, while longer-term storage can help provide supply over days or ...

Cloud energy storage (CES) in the power systems is a novel idea for the consumers to get rid of the expensive distributed energy storages (DESS) and to move to using a cloud service centre ...

To address this issue, a new type of energy storage business model named cloud energy storage was proposed, inspired by the sharing economy in recent years. This paper presents a ...

The smart homes/buildings, inside the MGs, are hosting renewable photovoltaics (PVs), targeting their energy harvesting maximization. Based on data sharing possibility, higher flexibility is ...

VPPs act as a single power generation entity, enabling owners of DERs--such as solar panels, wind turbines, and energy storage systems--to pool their resources. This collaborative ...
