

The time to plan for the sudden influx of aged and dated solar materials is now- Africa can't afford to become a toxic dumping ground for the e-waste detritus left behind by solar.

Over the 12 months to June 2025, imports of solar photovoltaic (PV) panels into Africa reached record levels, driven overwhelmingly by Chinese exports.

There has been a major pick-up in solar panel imports into Africa over the past 12 months - a shift that is likely to impact almost every country on the continent.

Venergy Solar, which has been operating since 2009, spends time testing, grading and cataloguing the solar panels, sending those with plenty of usable power to communities in Africa,...

There has been a major pick-up in solar panel imports into Africa over the last 12 months - a shift that is likely to impact almost every country on the continent. This report presents Ember's ...

This technical brief examines the critical intersection of Africa's growing solar PV investments and climate resilience.

A new report from Power Shift Africa and the Institute for Sustainable Futures at the University of Technology Sydney shows how it can be done and why it needs to be a global priority.

advantage of promoting the growth of off-grid renewables. National institutional players in the region are looking at increasing off-grid solar energy to mitigate the effects of the fluctuating price of petroleum, ...

This review paper investigates the potential of solar photovoltaic (PV) in African cities from three perspectives. Firstly, the potential of rooftop PV in the context of the political, economic, social, ...

This question underscores the urgent need for solar panel recycling in Africa, an issue that offers significant business and investment opportunities while addressing environmental ...
