

Expert insights on managing risks and mitigation strategies in solar electric power generation to drive sustainable growth.

This paper contains risk analyses with both PV system-specific risks as well as risks associated with Tucson Electric Power's AC electric power distribution grid.

Solar Photovoltaic Systems have been widely adopted and integrated into several facets in the built environment, owing to the clean energy generated from it. Ho

The sixth annual Solar Risk Assessment highlights the remarkable progress and resilience of the solar industry in the face of rapidly evolving risk management challenges.

The aim of this study is to identify the main risk groups and risk factors associated with operating the solar PV power plants, as well as to assess and analyze the effects of these risk ...

Floating PV modules face many of the same challenges as other types of PV installations, but they also face unique risks (see page 11). Large storms that result in mooring/ anchoring failures ...

2024 Solar Risk Assessment Report highlights the remarkable progress and resilience of the solar industry in the face of evolving challenges.

Photovoltaic (PV) installations have rapidly and extensively been deployed worldwide as a promising alternative renewable energy source. However, weather anomalies could expose them to...

This paper examines the risks of sustainable photovoltaic power plants through a realistic case study. A comprehensive approach is presented through which consultants can use linguistic variables to ...
