

Power generation at Bosnia and Herzegovina power plants

Electric power generation is a key sector of economic activity in BiH. Electric power is primarily generated in coal-fired thermal and large-scale hydro power plants, and the country is a net ...

Overall electricity production in Bosnia and Herzegovina reached 1,391 GWh in May, a significant 27.2% increase compared to the same month last year. While renewable sources drove ...

Bosnia and Herzegovina experienced a notable 8% drop in electricity production in 2024, with total generation reaching only 14.3 TWh compared to the previous year, according to Edhem Bicakcic, ...

Power generation, which includes electricity and heat, is one of the largest sources of CO2 emissions globally, primarily from the burning of fossil fuels like coal and natural gas in thermal power plants.

Bosnia and Herzegovina (BiH), a country of around 3.5 million people, is currently a net exporter of electricity - the only one in the Western Balkans. More than half of its electricity generation capacity ...

Discover data on Gross Electricity Generation: Annual in Bosnia and Herzegovina. Explore expert forecasts and historical data on economic indicators across 195+ countries.

The recently introduced virtual power plant (VPP) model - allowing small producers to aggregate at least 1 MW across technologies and sell into the wholesale market - has catalysed investment; six VPPs ...

Hydropower has historically been the dominant renewable energy source in Bosnia and Herzegovina, and several hydropower plants are in operation. The country has been exploring opportunities to ...

Bosnia & Herzegovina's electricity mix includes 61% Coal, 35% Hydropower and 3% Wind. Low-carbon generation peaked in 2023.

Hydropower plants contributed 35.6% to the total electricity production, while thermal power plants accounted for 59.8%. Wind and solar power plants made up the remaining 4.6%.
