

How does the angle of the sun affect the amount of solar energy received? When the sun is directly overhead (at a 90-degree angle), the sunlight is concentrated over a smaller area, resulting ...

We ask and answer a series of questions regarding the potential of the sun to supply energy to the world. The questions are drawn in large part from the U.S. Department of Energy Office of Basic ...

This amount of power is known as the total solar irradiance. (Before scientists discovered that it varies by a small amount during the sunspot cycle, total solar irradiance was sometimes called ...

Globally, roughly a third more power is being generated from the sun this spring than last. If this exponential rate of growth can continue, we will soon live in a very different world.

Thermal (heat) energy technology captures the same photons, changing light from the sun into heat that powers a generator and makes electricity. Not only can this type of technology help keep your house ...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine

Unlike solar cells in panels, which use sunlight to generate electricity, concentrating solar-thermal power technology uses the sun's heat. Lenses or mirrors focus sunlight into a small beam that can be used ...

Solar energy is, simply, energy provided by the sun. This energy is in the form of solar radiation, which makes the production of solar electricity possible. Electricity can be produced directly from ...

Ditching fossil fuels to go 100 per cent renewable is a dream within reach - thanks to new tech that keep things humming even when wind and sun aren't there

From the teacher in South Africa who buys a \$2 charger for her phone to the company developing 10 GW power plants, everyone who uses solar is buying basically the same product.
