

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

A large part of the solar power capacity installed in China is in the form of large PV power plants in the west of the country, an area much less populated than the eastern part but with better solar ...

China's 1km-wide solar array in space is expected to collect as much energy in a year as the total amount of oil that can be extracted from the Earth. Renewable energy, crucial for the energy ...

Far off the coast of Shandong, a new kind of power plant is quietly feeding China's coastal cities. A vast field of solar panels, fixed to steel trusses in shallow water, has become the world ...

China is a solar energy hub that houses a number of the world's largest solar power plants. Over the last few years, China, which is the top emitter of greenhouse gases (GHG), has increased its share of ...

Midong features 5.26 million 650-W monocrystalline bifacial double-glass photovoltaic (PV) panels. The facility's infrastructure includes more than 1.23 million supporting piles, five 220-kV...

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, ...

Chinese scientists have announced a plan to build an enormous, 0.6 mile (1 kilometer) wide solar power station in space that will beam continuous energy back to Earth via microwaves.

China is using the high-altitude expanse for immense solar panel farms and wind turbines and has begun work on the world's largest hydroelectric dams.

The panels are cooled by sea air and receive extra reflected sunlight from the water, they generate 5-15% more power than similar systems on land. China has transformed a vast stretch of ...
