

What does a solar inverter fault code mean?

Inverter fault codes: These codes, made up of numbers or letters, can indicate what's wrong. All of these signs may indicate the need to check your system and figure out how to reset the inverter fault or call for service. A solar inverter fault doesn't always mean your system is damaged.

What is a solar inverter error code?

Many solar inverters display fault codes or solar inverter error codes to help identify the cause. These codes are useful when diagnosing the problem or resetting the inverter. Solar panels produce electricity as direct current (DC), but homes use alternating current (AC). The inverter converts DC to AC so your appliances can use the power.

Why should you know the inverter fault code?

Knowing the inverter fault code helps users to stay calm when facing situations where a fault may occur and then deal with it appropriately, avoiding the occurrence of inverter failure. During the inverter application process, the possibility of the inverter monitor displaying the inverter fault code is inevitable.

What are SolarEdge inverter error codes?

SolarEdge may display numeric inverter error codes like 18x or 33x, which relate to DC voltage range issues or ground faults. SMA inverters might show inverter error codes tied to overheating or inverter self-test failures.
