

In an age of finding creative ways to recycle end-of-life products, a Swiss startup is using retired wind turbine blades as solar panel support beams.

Wind turbine blades have a reasonable surface area and extra power from solar panels mounted on them could easily be transmitted to the grid via existing wind farm infrastructure. But even so, the ...

What sets the Soleolico wind turbine apart is not just its ability to generate wind energy, but its integration of solar panels into the turbine blades. This dual-capacity generation system ...

On October 6, 2023, energy company Soleolico unveiled the world's first wind turbine equipped with photovoltaic panels mounted on rotating blades, aptly named "sails.". This innovative ...

What sets the Soleolico wind turbine apart is not just its ability to generate wind energy, but its integration of solar panels into the turbine ...

The performances of turbine blades have a significant impact on the energy conversion efficiency of vertical solar power plants. In the present study, such a relationship is assessed by ...

The rotor blades of old wind turbines are fitted with solar panels, which then generate energy that can be fed into the power grid. The blades' robustness and weather resistance ...

Discover our Hybrid Wind Turbine Blades Kit! Perfect for small wind/solar systems. Durable, weather-resistant, and ready for off-grid energy. Order now!

Turn2Sun has introduced "Blade2Sun," a sustainable, competitive solar solution for reusing wind turbine blades. Reusing old wind turbines in the energy sector is a green and innovative ...

With over 300,000 wind turbines installed worldwide, Swiss startup Turn2Sun uses recycled wind turbine blades as horizontal supports for solar panels instead of metal beams.

A Swiss startup is using reclaimed wind turbine blades instead of metal beams as horizontal supports for solar panels.
