

A record-breaking year for solar generation and a leap in battery capacity have shifted the U.S. energy landscape, turning solar into a primary workhorse for meeting the nation's surging ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Latest news on the solar energy and photovoltaics industry in the USA: installations, manufacturing, markets & policy, and technology.

The United States installed a record-breaking 50 gigawatts (GW) of new solar capacity in 2024, the largest single year of new capacity added to the grid by any energy technology in over two ...

We now add to that record by virtue of our collaboration with REC, the current U.S. residential solar panel industry volume leader, known for durability, high quality standards, and ...

Discover our comprehensive collection of press releases that highlight the industry-leading events and conferences tailored for professionals in the solar PV industry.

And the potential is surprisingly large: Reservoirs could host enough floating solar panels to generate up to 1,476 terawatt hours, or enough energy to power approximately 100 million homes ...

SETO released a notice of funding opportunity for research, development, and demonstration projects that commercialize innovative solar PV technologies in crystalline silicon module, cadmium telluride ...

In this section, we post daily media releases regarding solar and other sustainable energy sources. We gather official statements from major solar suppliers and installers worldwide.

Join us at Solar Power World as we cover the world of solar news on technology, development and installation on a daily basis.
