

Driven by a combination of limited capacity to integrate variable solar power into the local power systems of the western region and air pollution control policies that increasingly constrain coal use in eastern China, there ...

The country's huge role in energy storage raises questions for US projects amid Washington and Beijing's trade war

Carbon Brief explores how China has been driving the energy storage sector forwards and how it fits into the nation's wider energy transition.

Within a year, China will own enough solar manufacturing plants in the United States to serve about half of the nation's solar panel production capacity.

Roughly half of that came from China, highlighting the extent to which battery and component shipments to key US industries are caught in the crossfire of escalating trade tensions between Washington ...

Chinese solar and energy-storage companies will continue to press ahead with their overseas expansion with or without a long-term agreement on trade tariffs, as production abroad holds the...

China also presents severe forced labor risks that the U.S. solar industry has been distancing itself from for over two years. The United States must therefore strive to build a solar and storage ...

According to the released data, the development of the energy storage industry in China and the United States has accelerated, and each has a unique market environment and industrial development ...

Amid escalating trade tensions and tariffs imposed by the United States, China's solar and energy-storage companies are strategizing to sustain their growth and global presence.

Despite policy headwinds earlier in the year, energy storage additions in China and the US are set to continue growing this decade. The removal of storage mandates in China for renewables and the ...
