

# Uninterruptible power supply equipment in the Dominican computer room

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is key in server rooms and data centres. Why? It gives backup power during blackouts, keeping vital equipment running. It works fast as light, spots power gaps, and then flips to its battery reserve. This avoids losing data or damaging hardware. What's more?

What is an uninterruptible power supply for a server room?

A Uninterruptible Power Supply, or UPS for server room, has one main job: keeping power steady. Its job is to stop machines from failing if the lights go out. The server room is the heart of a company's tech. It keeps important applications, databases, and services running. Imagine if the power cut out.

How does ups work in a server room?

UPS for server room works in three main ways of functioning. Here, the UPS gets its power from the regular power supply. This supply has the right voltage and frequency the UPS needs to work. During the Normal Mode a piece called a rectifier changes AC power to DC power. This powers up an inverter and charges batteries.

Why do you need an UPS system in the Philippines?

As a result, a UPS system can help you prevent data corruption and hardware damage.
