

How many kilowatts are in a GW Solar System?

One GW = 1,000 megawatts. Inverter: Component of a solar panel system that converts the electricity generated by solar panels into a format that can be used to power your home. Kilowatt (kW): How we measure the size of a home solar panel system. A kilowatt is just 1,000 watts.

What is a solar panel rating?

Solar panels are photovoltaics and make up a PV system. Power output/rating: The number of watts a solar panel produces in ideal conditions. It's a good indicator of quality, but most solar panels don't experience ideal conditions for more than a few moments.

What is a solar inverter?

Inverter: Component of a solar panel system that converts the electricity generated by solar panels into a format that can be used to power your home. Kilowatt (kW): How we measure the size of a home solar panel system. A kilowatt is just 1,000 watts. Megawatt (MW): Some commercial solar projects are over one MW in capacity.
